Exploratory Energy Workshop, Bucharest – 17th – 19th September 2008

Tackling GLOBAL WARMING is urgent and FOSSIL FUEL prices are rising...

□ 7 Billion tons (min.) of CO₂ emitted to the atmosphere PA globally!!!! □ 30 Billion tons of coal & 13 Billion barrels of oil burned each year! 'VOF NIVERS

1 barrel: 0.317mt of CO₂ (min.)

BIRMINGHAM

'Prime Minister Gordon Brown has committed the UK to reducing carbon dioxide (CO₂) emissions by 60% before 2050 to help tackle global warming'

The Climate Change Bill will make the UK the first country to put carbon emissions reduction targets into law...

while the bill will also enforce reductions of greenhouse gas emissions of between 26% and 32% by 2020

GLOBAL ISSUES

 \Box CO₂ & Global Warming

Improved fuel efficiency and non carbon fuels favoured

- □ Oil production to peak in 2010-2020 (?)
 - In Most oil produced from a fewer giant fields production from these fields will peak around 2015
 - → 2007 Oil Reserves stand at 1237.9 billion barrels (BP estimate)
 - → This will encourage alternative fuels
- □ Population growth
 - \Box Longer life expectancy \rightarrow rise in world population from
 - 6.3 Billion to 9 Billion over next 45 years is inevitable!
 - → Improved pollution standards required just to keep up!

Hydrogen and Fuel Cell Technologies: for a low carbon future...

....one possible solution!

'It is predicted by 2050, Hydrogen and Fuel Cells technologies will have an important impact in the UK... a multi-billion pound (ca.£10B in 2013 globally) market!'

UK government, 2005

TOMORROW'S ENERGY will be from FUEL CELLS using HYDROGEN to generate ELECTRICITY!

NewScientist, 2007

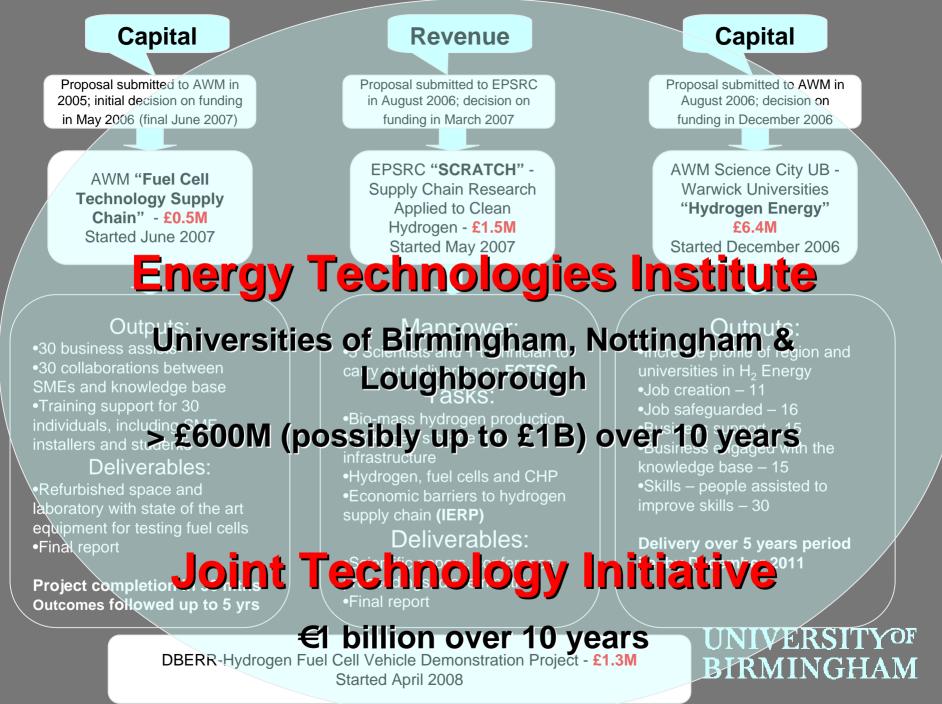

Hydrogen Cycle

Production

Applications

Economics

Created by: Dr W. Bujalski

How we produce Hydrogen

□ Biohydrogen: Food wastes + bacteria → H₂ (bioreactors)

AVIs\PR Hydrogen Video.avi

□ Supercritical Water Gasification (SWG): Dissolution of Organic compounds & lignocellulosic materials, as solid biomass in SC water at elevated temperature → H₂

- \Box Electrolysis: Water \rightarrow H₂ + O₂
- □ Hydrocarbon (Reforming)
- □ Photoelectrochemical Water Splitting
- □ Other possible methods BUT not cost effective!

Hydrogen Production Hydrogen Storage Hydrogen Applications

Solid-state Hydrogen Storage Materials & Synthesis

□ New potential hydrogen storage material:

- $Li_4BH_4(NH_2)_3$

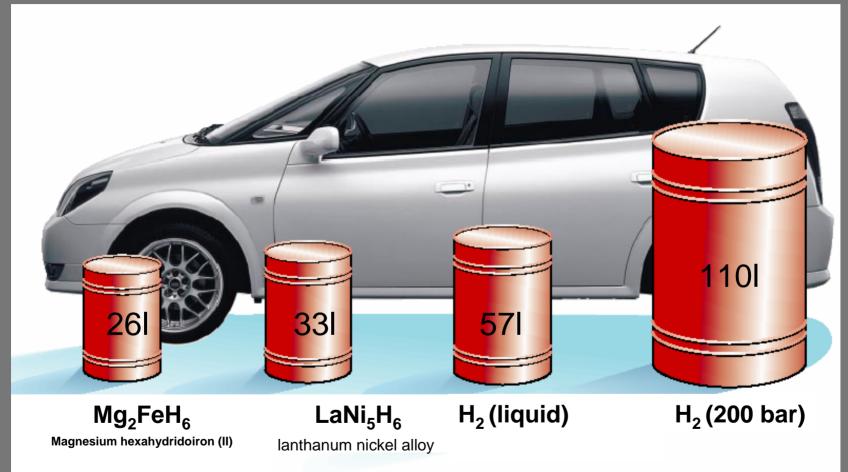

- Combination of Amine Boranes with MgH_2 and $LiNH_2$ for High Capacity Reversible Hydrogen Storage

Synthesis and Characterisation: casting (conventional and rapid quenching), ball-milling, thin-film preparation (PLD and Magnetron sputtering)

VOLUME OF HYDROGEN STORAGE

4 kg hydrogen

3 I gasoline / 100 km = 0.3 kWh / km

Louis Schlapbach & Andreas Züttel, NATURE | VOL 414 | 15 NOVEMBER 2001 | pp. 353-358

Requirements for Hydrogen Stores

High H atoms content per unit mass of metal
 Low cost

Absorb & Desorb Hydrogen around 1 atm @ RT
 Low heat of formation of hydride ~ 9kcal/mol H₂
 Reproducible & favourable reaction kinetics
 Not readily poisoned by gaseous impurities
 Safe on exposure to air

Fuel Cells Technologies

<u>Fuel Cell</u> <u>Type</u>	<u>Electrolyte</u>	Anode Gas	<u>Cathode Gas</u>	<u>Temp.</u>	<u>Eff.</u>
Proton Exchange Membrane (PEM)	solid polymer membrane	hydrogen	pure or atmospheric oxygen	75°C (180°F)	35 – 60%
Alkaline (AFC)	potassium hydroxide	hydrogen	pure oxygen	below 80°C	50 – 70%
Direct Methanol (DMFC)	solid polymer membrane	methanol solution in water	atmospheric oxygen	75°C (180°F)	35 – 40%
Phosphoric Acid (PAFC)	Phosphorous	hydrogen	atmospheric oxygen	210°C (400°F)	35 – 50%
Molten Carbonate (MCFC)	Alkali- Carbonates	hydrogen, methane	atmospheric oxygen	650°C (1200°F)	40 – 55%
Solid Oxide (SOFC)	Ceramic Oxide	hydrogen, methane	atmospheric oxygen	700– 1000°C (1300– 1800°F)	45 – 60%

Market Forecasts

The overall fuel cell market is segmented on the basis of the power output categories into three different markets:

< 50 kW – PEMFC/SOFC/AFC/DMFC for portable & micro/mini CHP systems

Revenues by Technology Forecast (2010) for Fuel Cells Market in Europe

50 kW - 300 kW – MCFC/SOFC for residential & commercial – PEMFC for transportation

> 300 kW – MCFC/SOFC larger CHP systems UNIVERSITY^{OF} BIRMINGHAM

PEMFC Commercialisation Roadmap Potential Penetrable Markets

BIRMINGHAM

Hydrogen and Fuel Cell Supply Chain

Outline possible supply Chains leading to the hydrogen & fuel cell economy

Focus on biomass, hydrogen storage, fuel cell CHP
 & vehicle, and economic barriers

□ Bring min. 30 companies together in supply chain

□ Zero Emission campus → ZE country UNIVERSITY OF BIRMINGHAM

Our Objectives

(i) Develop the Science, Technology and **Supply Chain** for Hydrogen and Fuel Cells

 (ii) Generate new technologies, employment, growth, a wealthy Hydrogen and Fuel Cells economy as well as international reputation

(iii) Involve local SMEs to take part in the Supply Chain for Hydrogen and Fuel Cells

UK West Midlands H2&FC Suppliers

Problems to be solved!

□Source of Green Hydrogen

Distribution & Infrastructure

□Utilisation by fuel cells

□Economic drivers

Economic Drivers

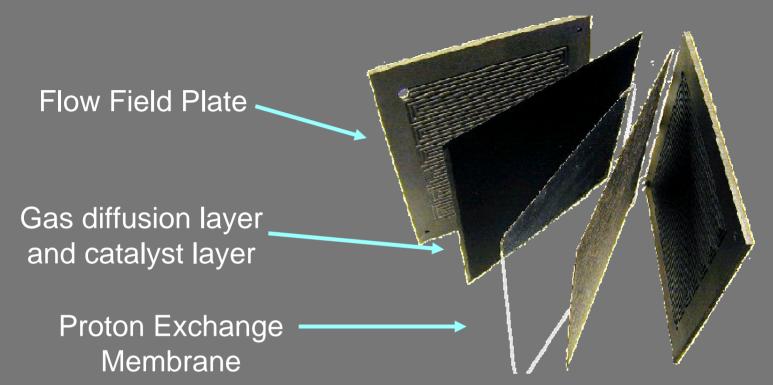

□ Collaboration with Professor Richard Green

□ Main objective is to understand costs

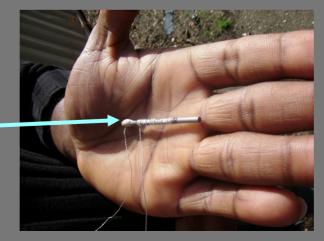

□ Explicit costs: e.g. hydrogen & fuel cell cost

□ Hidden costs: e.g. barriers to grid connection

Our Key Research Areas

Microtubular SOFC

Our Key Research Areas

- Low cost, high performance & durable 'engineered' fuel cell electrodes
 Novel low cost materials with high performance & longevity for: bipolar plates (BPPs), current collector plates (CCPs), gas diffusion layers (GDLs), catalyst layers (CLs) and solid electrolyte membrane (polymeric & ceramics)
- Novel low cost fabrication processes for such materials
- New development of test methods (ex-situ & in-situ diagnostic) for determining physical properties, performance & durability of PEMFC & SOFC
- Improving electrocatalysts & noble base metal alloys, catalyst utilisation and electrode design
- Developing & testing novel type of electrocatalysts and noble base metal alloys as Nanoparticles
- Developing & testing non-noble metal electrocatalysts in views of reducing cost while improving on performance and durability

Successful Projects

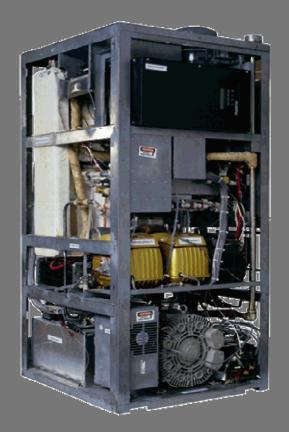

Micro-tubular SOFC Demonstrator

AVIs\SOFC-demonstrator-watermarked.avi

Successful Projects

Combined Heat and Power System for domestic applications

Example of successful project using Hydrogen Fuel Cell for household applications

House in the West Midlands heated by a Hydrogen Fuel Cell

PEMFC

Fuel: Natural Gas & Air

The fuel cell has a dual purpose:

(i) Supply of electricity(ii) Heating

Microcab Hydrogen Fuel Cell Vehicles Example of successful project using Hydrogen Fuel Cell for the automotive industry

Successful Projects

Hydrogen Fuel Cell Narrow Boat

Batteries & Motor

- 10 large cylinders, each containing 30 kg of metal hydride power.
- Gives about 5 kg of hydrogen.

PEM Fuel Cell

Operating pressure is < 10 bar

The Protium Project

The Midland Hydrogen Ring

• The British Midlands Hydrogen Forum is to establish the 'Midlands Hydrogen Ring' – a series of fuelling stations across the region for hydrogen vehicle development and testing activity, which will link up with similar facilities in neighboring areas

• The Hydrogen Ring will raise the Midlands' profile as a region seriously engaged in the development of low-carbon transport technologies, and will draw additional activity into the region

• The second hydrogen fuelling station is already under construction at Loughborough and the BMHF as recently secured funding from both *emda* and AWM for a scoping study, which will see the rollout of this exciting project

British Midlands Hydrogen Forum

Hydrogen Fuelling Station at the University of Birmingham Air Products, fully commissioned April 08
