# Highly-Ordered Molecular Nanoarchitectures: Concepts for Biosensors

SORIN MELINTE

UNIVERSITÉ CATHOLIQUE DE LOUVAIN, LOUVAIN-LA-NEUVE 1348, BELGIUM

Many thanks to Andrei Ruckenstein  
«Quantitative Biology: The New, Cross-disciplinary Paradigm»  
If you come to a fork in the road, take it [quoting Yogi Berra]

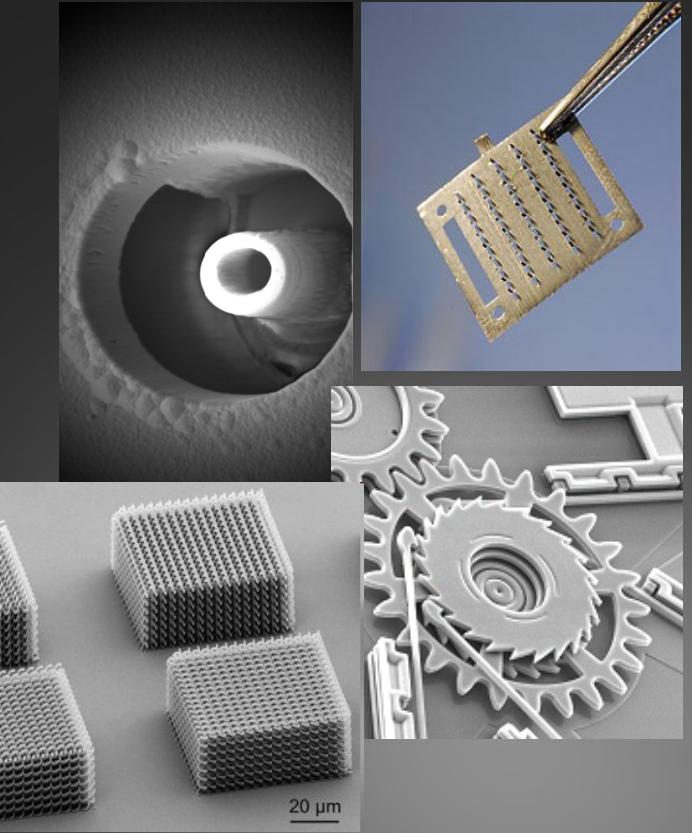

**UCL**

# Why 3D Sensing Platforms and Direct 3D Structuring?

[Yogi Berra]:

I wish I had an answer to that because  
I'm tired of answering that question

- High surface-to-volume ratio for increased reactivity
- Functional platforms and membranes for 3D models
- Micro- and nanomachines for bottom-up fabrication
- Highly-ordered, periodic structures...for sensing

## Direct Electron-Beam Writing of 3D Polymer Structures

**UCL**

# Patterning PANI: Current Status

## Why polyaniline?

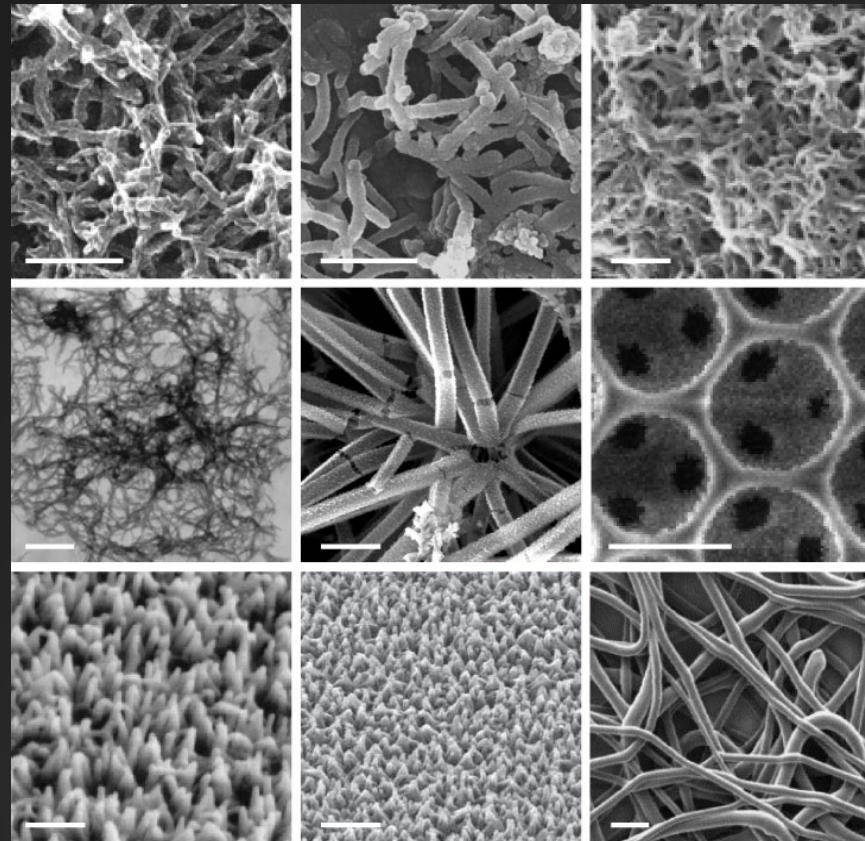

- tunable opto-electronic properties
- electrical bistability
- actuation

## Developed Approaches

- interfacial polymerization
- surfactant assisted polymerization
- seeding polymerization
- oligomer assisted polymerization
- template confined chemical and electrochemical growth
- diluted polymerization
- electro spinning

## Our approach

- higher resolution patterning
- precise positioning
- multi-directional alignment

# Electroless Polymerization of PANI: Mechanism

## Ingredients:

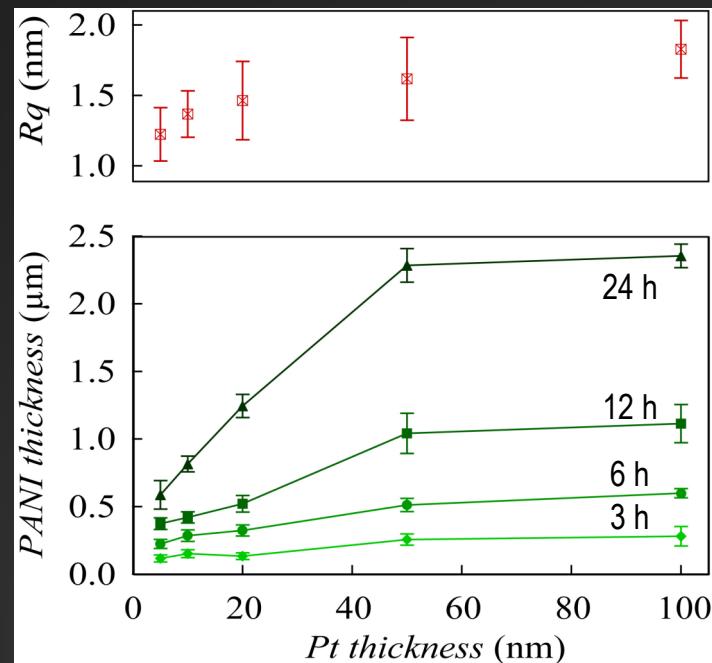

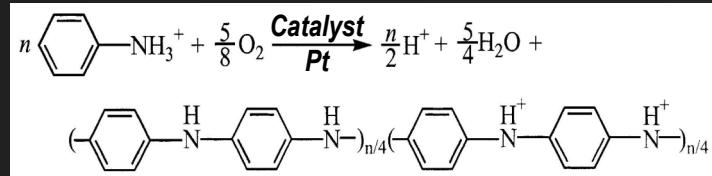

- $C_6H_5NH_2$  and  $H_2SO_4$  in  $H_2O$
- $O_2$  saturated solution
- Pt as catalyst

## Mechanism:

- oxygen reduction
- aniline oxidation } at Pt surface

## Kinetics:

- linear time dependence
- exponential temperature dependence
- surface rather than bulk dependence

Electrochemical process without any external charge supply
