Biopolimeri (IntelCentru)**

Poly[(N-acylimino)ethylene] (PNAI) building blocks

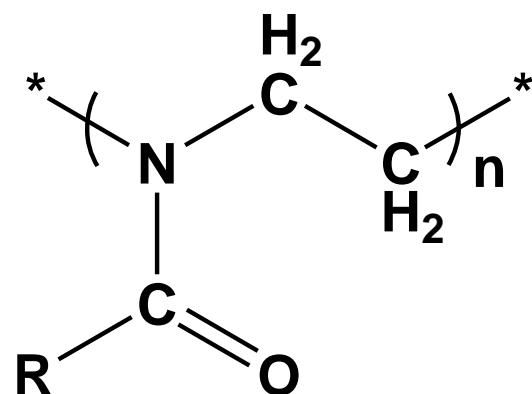

- Functional micro- and nanoparticles based on PNAI building blocks
- PNAI – based gels

Poly[(N-acylimino)ethylene]s (PNAI)

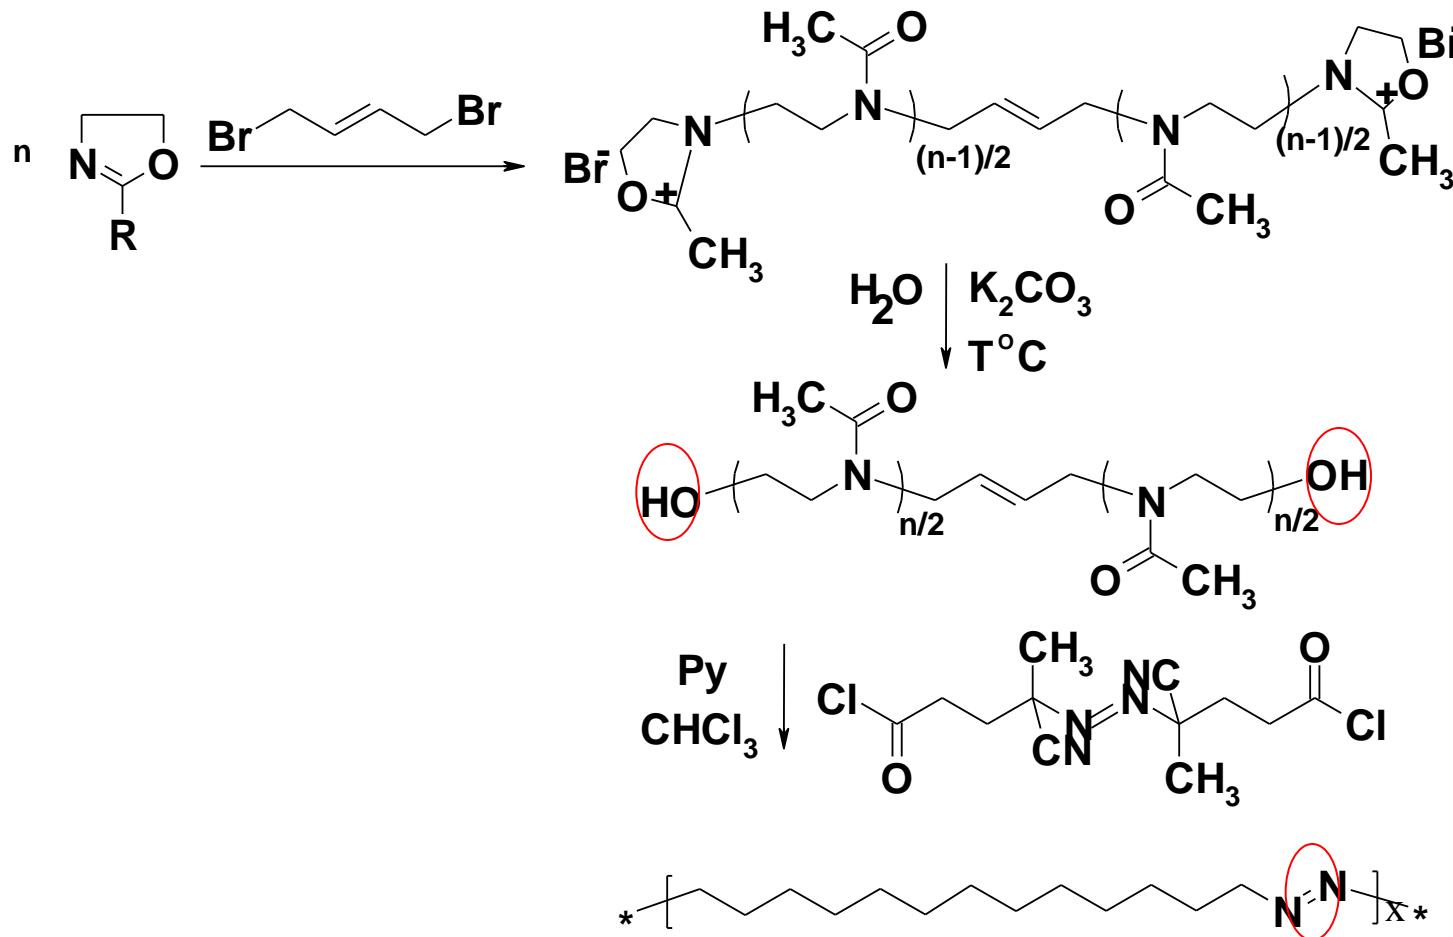

- control of structural properties (living cationic polymerization)
- biocompatibility or no acute toxicity
- hydrophilic or hydrophobic properties (R)
- chelating ability
- good adhesion to polar surfaces
- facile modification to PEI
- compatibility with most common organic polymers
- chain flexibility
- crystallization ability

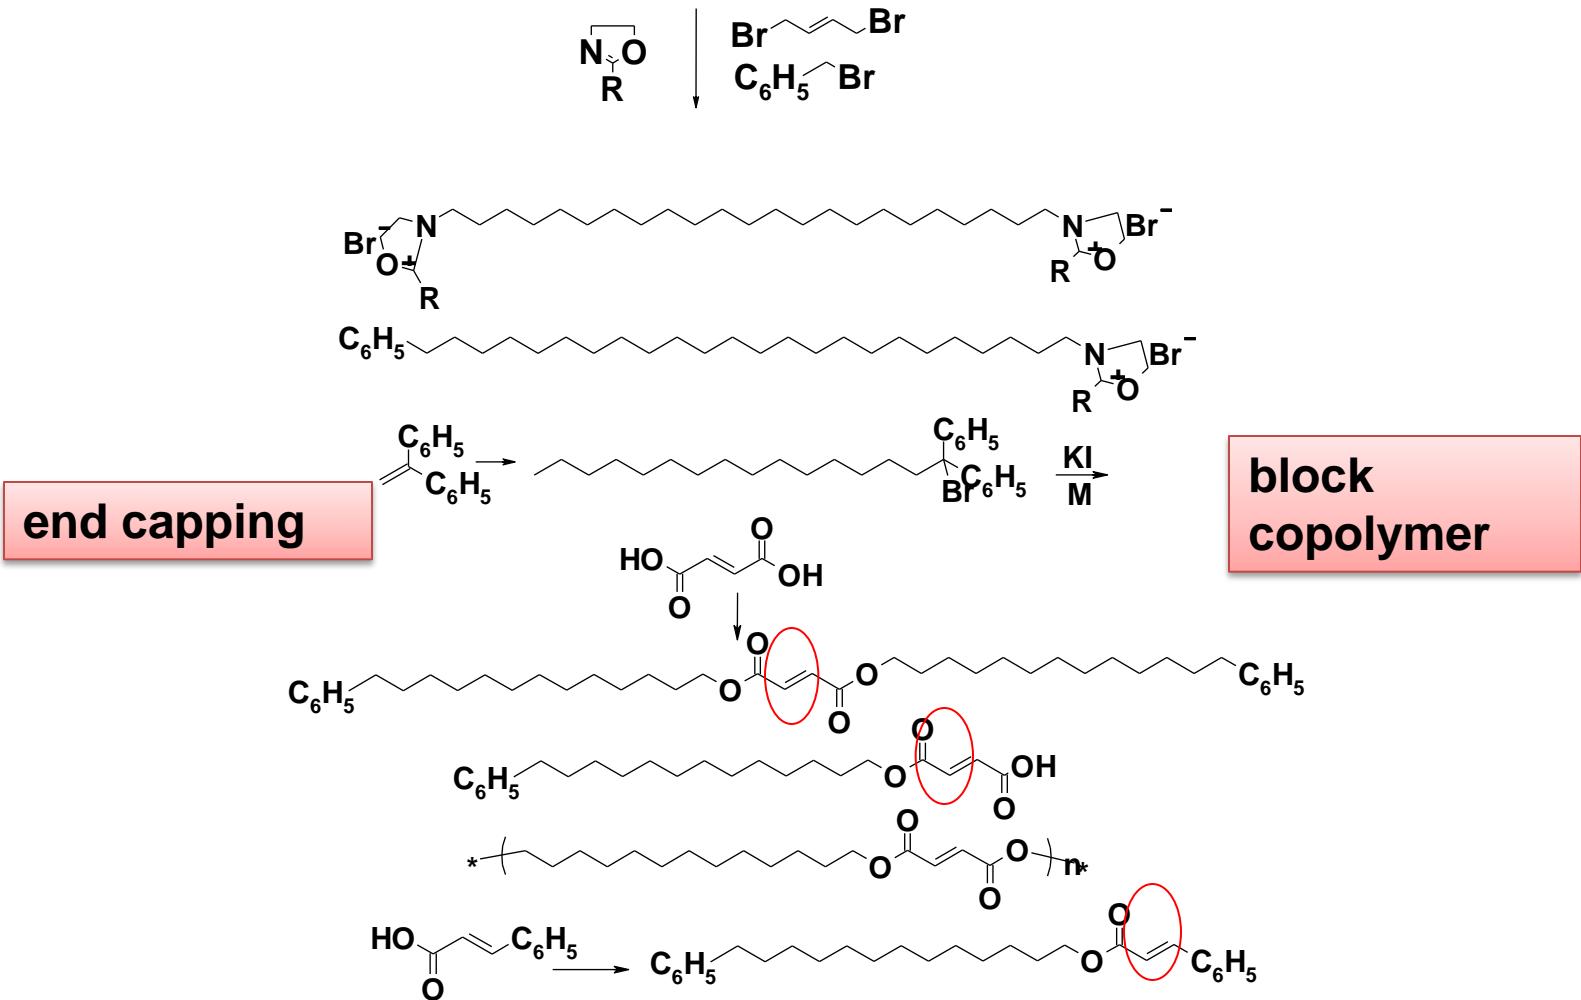

tailored polymers
multifunctional polymers
complex architectures

Poly[(N-acylimino)ethylene] azo initiators

Functional polymers by end capping of living PNAl chains

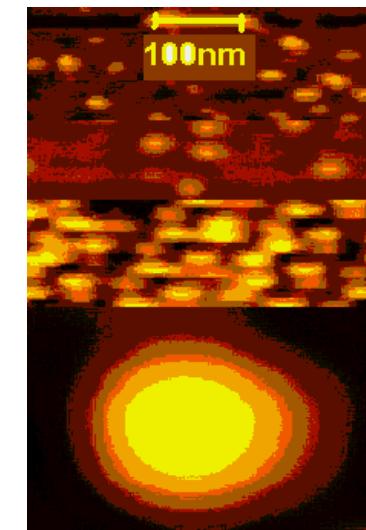

Functional micro- and nanoparticles

- dispersion polymerization
 - monomer: styrene
 - stabilizer: poly(N-acetylenimine) macromonomer
($D_n = 0.5 - 1 \mu\text{m}$, PI = 1.02 - 1.05)

- soapless emulsion polymerization
 - monomer: styrene, methyl methacrylate
 - poly(N-acetylenimine) macroazoinitiator
($D_n = 100 - 200 \text{ nm}$, PI = 1.02 - 1.04)
 - monomer: styrene
 - poly(N-acetylenimine) macromonomer
($D_n \sim 200 \text{ nm}$, PI = 1.006 - 1.04)

- microemulsion polymerization
 - monomer: methyl methacrylate, butyl methacrylate
 - co-surfactant: poly(N-acetylenimine) macroazoinitiator or macromer
 - main surfactant: SDS
 - ($D_n = 10 - 50 \text{ nm}$, PI = 1.2)

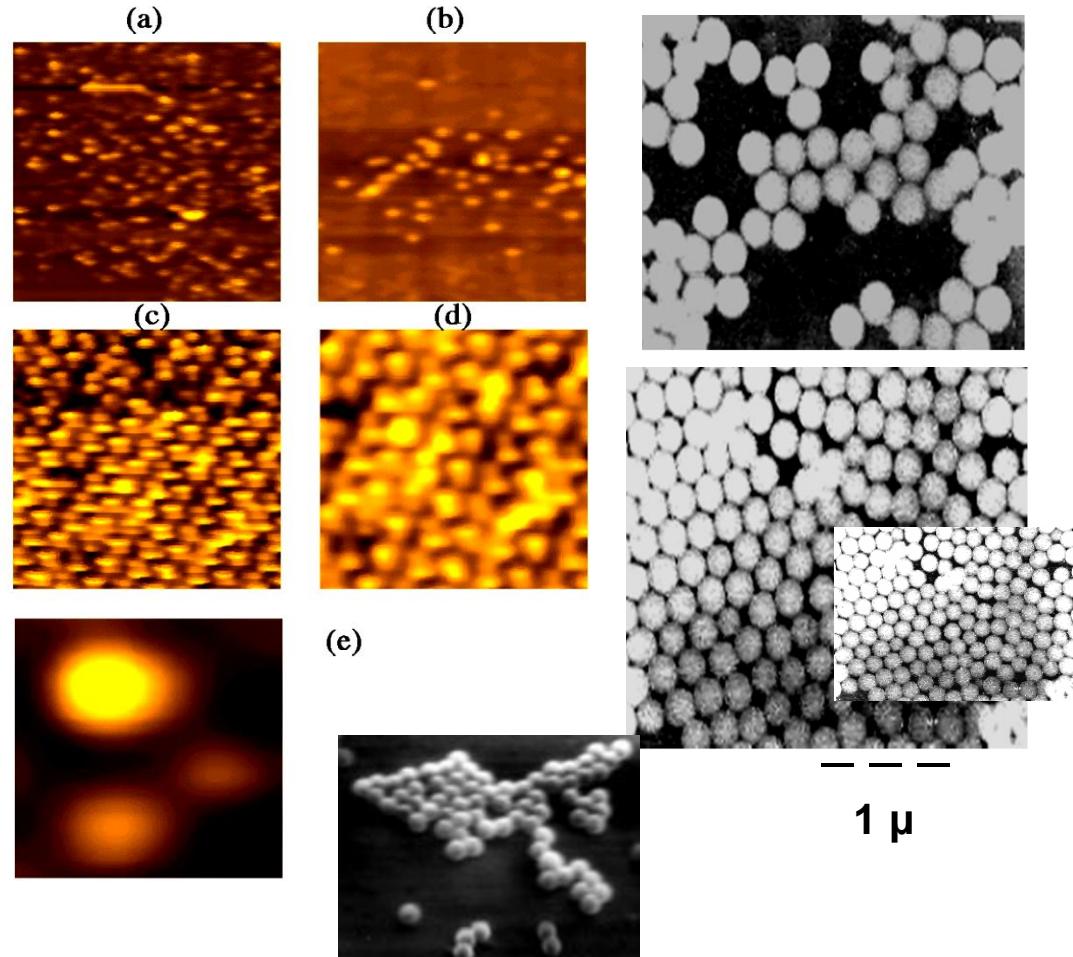

D_n: 10 – 1000 nm
PI: 1.006 – 1.2
core-shell structure

Core-shell nano/micro particles by soapless emulsion / microemulsion polymerization

- ✓ size control
- ✓ high surface functionality
- ✓ high purity
("clean" particles)
- ✓ low toxicity
- ✓ bio-compound immobilization ability
- ✓ film forming ability
- ✓ narrow size distribution or "monodispersity"

drug release systems
uniform thin polymer films (electrode coating, biosensors)
high selectivity membranes

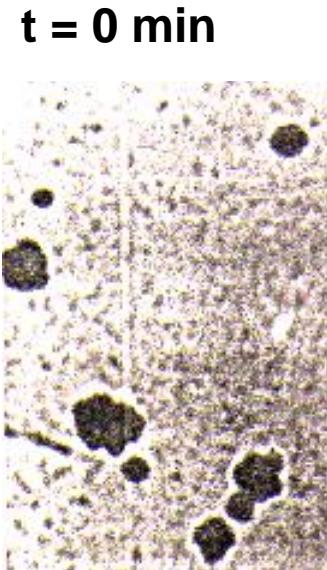

Organic – inorganic composite materials

MMA polymerization in the presence of silica and PNAI macroinitiator (soapless emulsion polymerization)

Peculiarities

- early formed amphiphilic oligomers act as dispersants
- increased polymerization rate
- increased adhesivity to inorganic particles
water-soluble PMMA-b-PNAI → dispersant

$t = 10 \text{ min}$

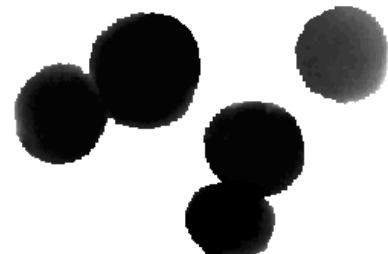

homogeneous
composite material

($t = 50 \text{ min}$)

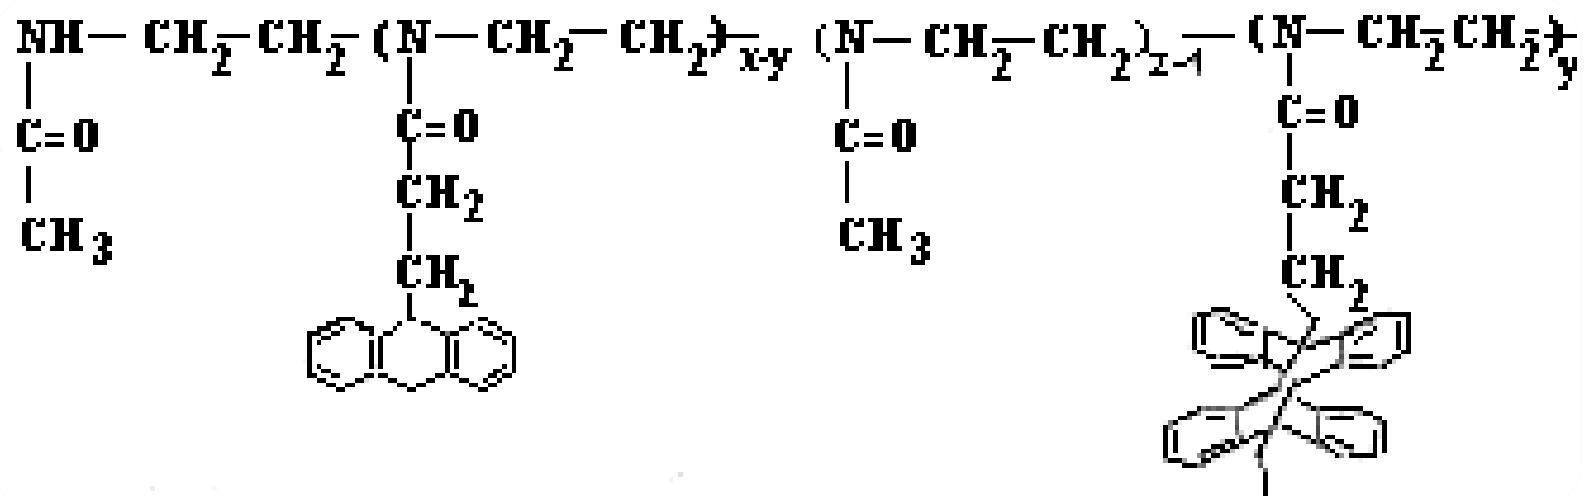

$\text{PI} = \sim 1.0$

$D_w = \sim 500 \text{ nm}$

PNAI – based gels

specific reactions of functionalized PROZO:
photodimerization of the photosensitive pendant groups

Thermosensitive gels

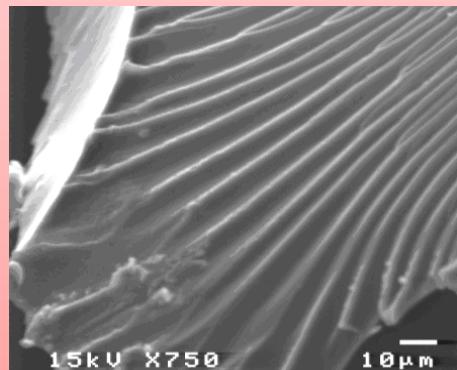

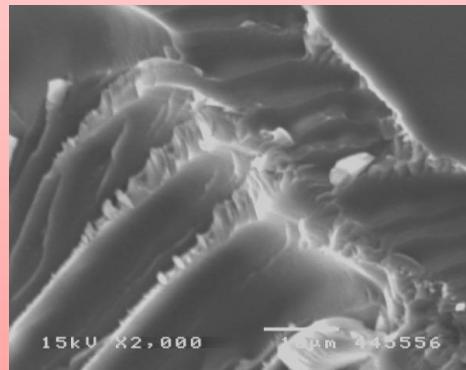

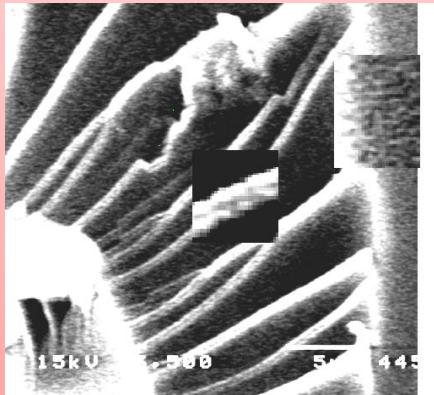

Precipitation polymerization

Monomers: HEMA

NIPAAm (LCST 32 C)

PNAI macromonomers (PEOZO – LCST 36 C)

Reaction conditions: HEMA/NIPAAm/PROZO w/w/w - 1:1:1
60 C, ethanol, AIBN, Ar, 20h

self assembled core-shell microparticles
interconnected pore structure

large channels
open macropores

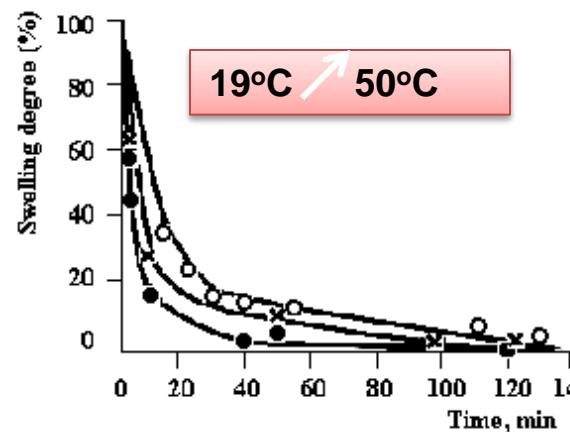

Stimuli responsive hydrogels

(temperature responsive)

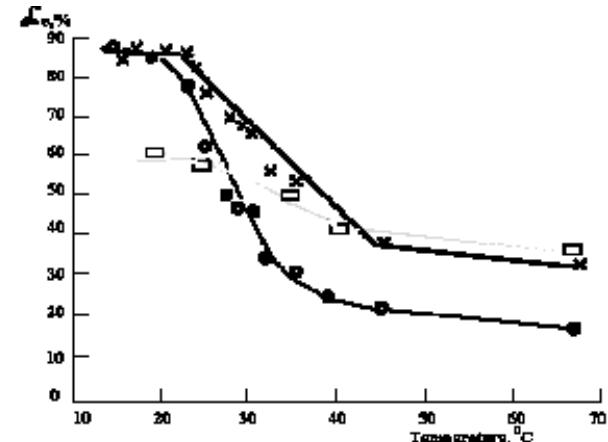

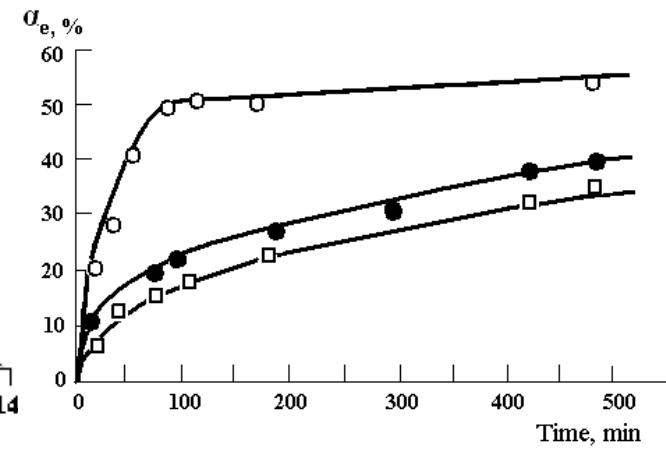

controlled structure and characteristics (hydrophilic/hydrophobic balance, crosslinking density, amount of thermosensitive chains)

LCST – therapeutic domain (28 – 38 C)

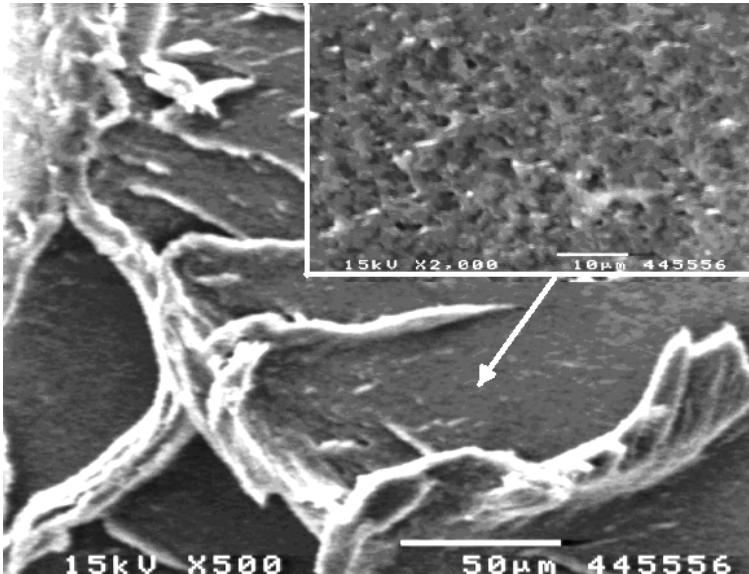

Sample	LCST (°C)
M ₆	27.5
M ₁₅	32.0
M ₂₅	33.0
M ₄₅	38.0
E ₁₅	28.5
E ₂₅	30.0
E ₃₅	32.0
E ₄₅	31.5
BC ₁	28.5
BC ₂	27.6

Swelling/deswelling kinetics

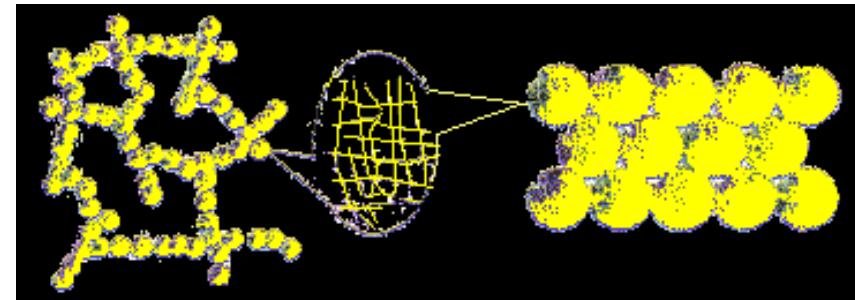

Self-assembling microgels

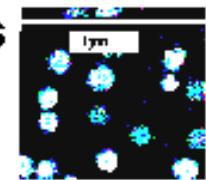

PEOZO/PNIPAAm/PHEMA hydrogel

“on-off” switching materials
controlled drug delivery and storage systems
biomacromolecules storage/release
tissue engineering, in combination with
biodegradable polymers (collagen)

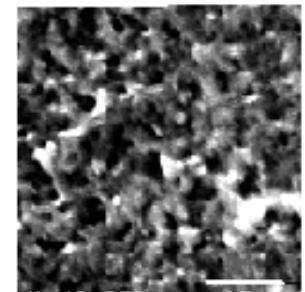

Self-assembling network
(ordered or not ordered)

Microgels

Thermosensitive gels

Біополімери (ІнтелЦентру)**

"Petru Poni" Institute of Macromolecular Chemistry (ICMPP)

- founded in 1949 as an institute of the Romanian Academy
- Institute of Excellence of the Romanian Academy
- ranked in the first/ second/ third position among the 64 institutes/ centres of the Romanian Academy; second/ third position on the list of most innovative research/high education bodies in Romania
- internationally recognized – ISI, Philadelphia, USA, lists the Institute among the “main Romanian actors on the international scientific scene”

Personnel

- Total - 284
- researchers - 109
- PhD students - 50 - 60
- young researchers (less than 35 years old): 30%
- personnel with university degree: 175
- PhD thesis promoters: 11

Prof. Bogdan C. Simionescu
bcsimion@icmpp.ro

Dr. Anton Airinei
airineia@icmpp.ro
Dr. Valeria Harabagiu
hvaleria@icmpp.ro

Mission/performance indicators

- Basic research in polymer science**
- yearly more than 170 papers, books, book chapters**
- yearly more than 200 presentations in scientific meetings**

- Applied research, technology transfer and small scale production**
 - industrial technologies for silicones, polyurethanes, ion exchangers, thermally resistant polymers
 - specialty polymeric materials
- Education & training (PhD, post-doc)**
- Services**
 - consultancy – preparation and processing of polymeric materials
 - transfer of knowledge, certification for polymeric materials

Cooperation Network

- National cooperation**
- universities, research institutions, companies, SMEs
- the Institute coordinates *5 Romanian consortia* and is involved in more than *70 multi-partner national grants*

- International cooperation**
- more than 50 research / high education centres in Europe, Japan, China, USA and Canada

European projects

- FP3 - partner in 3 projects (COST-PECO, PECO ERBIC IPDCT, INCO - COPERNICUS - ERBIC)
- FP5 - partner in 5 projects (2 INTAS, 1 CRAFT, 2 GROWTH)
- FP6 - partner in 7 projects (NoE, IP), project coordinator of SSA project RAINS
- FP7 - partner in 4 projects, 3 projects under second evaluation
- COST - partner in 6 COST Actions

- EuMaT Technology Platform, ENMat Platform

MAIN projects - 2010

- “Cristofor I. Simionescu” Postdoctoral School on Biomaterials (2010 – 2013)
- Advanced Research Center for Bionanoconjugates and Biopolymers (IntelCentru) (2009 – 2012)
- Synthesis and Investigation of Polymeric Metallosiloxanes – New Materials for Catalysis and Nanosciences (POLISILMET) (2010 – 2013)
- Strengthening the Romanian Research Capacity in Multifunctional Polymeric Materials (STREAMS) (FP7 – REGPOT-2010-1) (2011 – 2013)

biomedicale

NANOMEDICINA ...

Domeniile de interes în cadrul
Centrului de Cercetări Avansate
pentru
Bionanoconjugate și Biopolimeri

Centrul de Cercetari Avansate pentru Bionanoconjugate si Biopolimeri dispune de trei spatii de tip clean-room:

- un laborator pentru imagistica si caracterizarea nanoentitatilor (nivel ISO 6)
- cinci laboratoare pentru obtinerea si caracterizarea substraturilor destinate ingineriei tisulare si nanovectorilor (nivel ISO 8)
- un laborator pentru culturi celulare (nivel ISO 7)

Dus de aer steril, la intrarea in clean-room din clasa ISO 6 ...

Aspirator pentru clean-room – uri ...

Pregatirea vestimentatiei pentru lucrat intr-un clean-room din clasa ISO 8 ...

DIVIZIA „SINTEZA CHIMICA SI BIOSINTEZA” ..

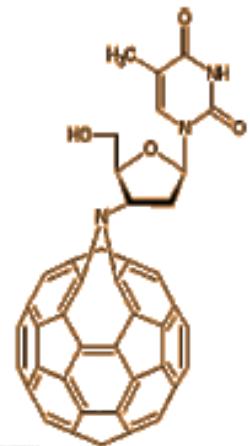

IntelCentru

Divizia „Sinteză chimică și Biosinteză” a Centrului dispune deja de toate facilitățile care să permită abordarea oricărei sinteze chimice în sfera compusilor macromoleculari, a nanostructurilor și a nanovectorilor.

Echipamente sofisticate pentru caracterizarea nanoentităților se regăsesc și sunt funcționale în laboratoarele diviziei.

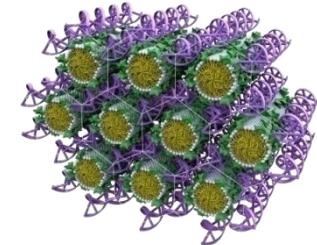

Delsa™ Nano Zeta Potential and Submicron Particle Size Analyzer

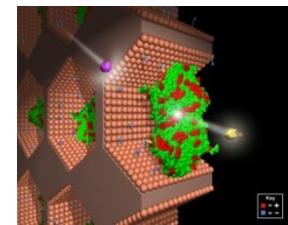

DIVIZIA „INVESTIGATII LA SCARA MICRO SI NANO” ...

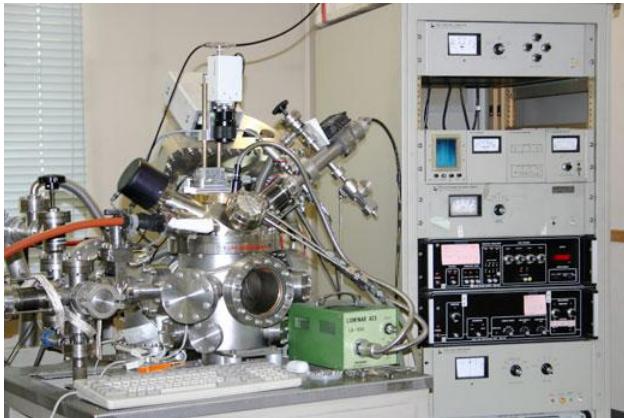

Divizia „Investigatii la scara micro si nano” a Centrului va include laboratoare de manipulare, structurare si caracterizare la scara micro si nano, prin tehnici moderne, capabile sa puna in evidenta spatialitatea si topologia reactivitatii fizico-chimice a nanostructurilor, nanomaterialelor si substraturilor micro- si nanostructurate.

Imagistica stiintifica in domeniul materialelor si a structurilor la nanoscara implica analize la energii extreme: fie deosebit de ridicate, fie cu valori infime, pentru a asigura rezolutii spatiale satisfacatoare.

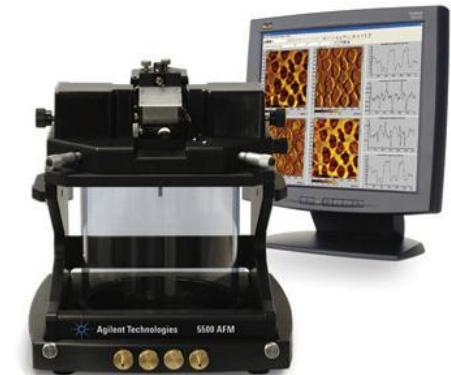

AFM - Raman

ESCA / XPS

TEM / SEM / STEM / ESEM

DIVIZIA „INGINERIE TISULARA SI VECTORI GENETICI NON-VIRALI” ...

Divizia „Inginerie tisulara si Vectori genetici non-virali” a Centrului va fi dedicata generarii de biomateriale si substraturi micro- si nano-structurate, biologic active si cito-prietenoase, precum si testarii efectelor biologice ale nanoentitatilor obtinute in cadrul diviziei ”Sinteza chimica si Biosinteza”.

Pentru controlul ciclului de viata al celulelor si pentru dirijarea sociologiei celulare, in cadrul acestei divizii se vor izola, purifica si caracteriza modulatori citologici de origine tisulara, utilizati apoi in culturi celulare.

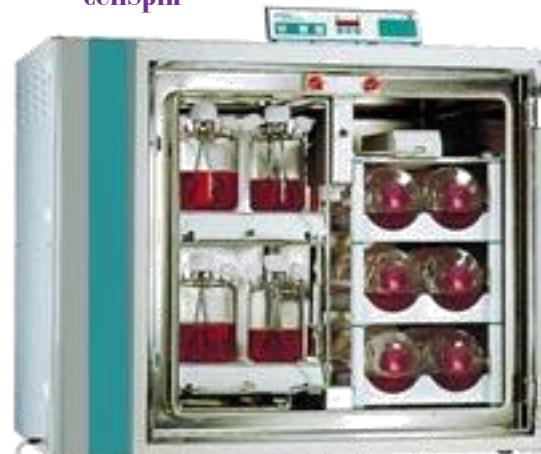

Laboratorul pentru culturi celulare

CellRol

CellSpin

CellLine

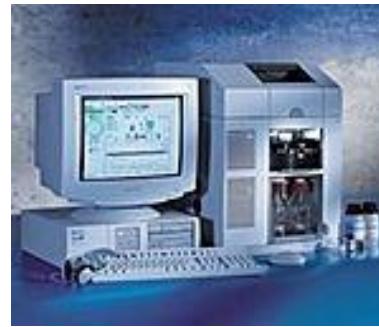

DIVIZIA „INGINERIE TISULARA SI VECTORI GENETICI NON-VIRALI” ...

Pentru studii de proteomică, enzimologie si inginerie celulară, divizia va dispune de sisteme analitice de înaltă finețe, capabile să discearnă între formele biologic-active ale speciilor biochimice și cele denaturate, ori cu funcționalitate alterată.

Sistem pentru electroforeza capilară

Spectrometru cu dicroism circular

Sistem pentru electroporatie

Sistem integrat pentru analiza cromatografică
